API

Jira, Trello, ClickUp

# Projects

**Project: Nudgify - https://www.qibri.com/en/**

**Role**: Senior Developer - Backend

**Technologies:** PHP, Laravel, Api, PgSQL, Docker, Git, MeiliSearch, React

qibri bundles and organizes corporate know-how in one central location. This allows you to harmonize work processes, relieve employees and achieve a better effect.

**Project: Nudgify - https://www.nudgify.com**

**Role**: Senior Developer

**Technologies:** PHP, MySQL, Laravel, vue.js, Node.js

Nudgify is a Social Proof app that helps websites to increase trust and sales. Nudgify began on Shopify and has since evolved into a stand-alone solution for any website. Nudgify is a web notifications app that businesses can use to add powerful notifications ("Nudges") to their website. - https://www.nudgify.com/docs/knowledge-base/nudgify-web-notifications-app/

**Project: StopGoNetworks - https://www.stonework.co.uk/**

**Role**: Senior Developer

**Technologies:** PHP, MySQL

Project is in Financial domain, in which loan applications are added on websites by loan seekers, then the system has many lender or buyer integrations to which each loan application applied is sent to. Buyer can now accept or reject. The user is redirected to the lender's website who accepts the lead. Here, I was involved in working on both the frontend and the backend of the application. Project is currently active in the US and UK and there are more than 25 websites created for both US and UK. All the communication happened on Trello where the client used to assign the workflow and tasks for the day.

**Project: EnvisionBX - https://www.envision-bx.com.au**

**Role**: Senior Developer

**Technologies:** Laravel, MySQl, 3rd Party api's - BambooHR, Xero, Stripe, jQuery, Bootstrap Framework

EnvisionBX creates a direct link between BambooHR with Xero for the first time, and makes the HR onboarding process super easy and efficient. EnvisionBX eliminates a major pain point for our customers in having to manage employee onboarding and leave management in two separate systems. I worked from scratch on this project which involved Requirement Analysis, defining project scope and its limitations, understanding two 3rd parties involved and providing the best possible solution to meet project requirements. Client communication and timely delivery was my other main focus on this project.

**Project: Project Portfolio**

**Role:** Lead Developer

**Technologies:** Laravel, Angular8

This was an internal project for management of organizations projects. Managing Employees from Zoho Hr solution and project reports for sending weekly and daily status reports to automate the management process for managers. I was involved in project planning and understanding organisations structure to send reports to different types of users. I worked on frontend and to set up project architecture and database.

**Project: EpicValet - https://www.epicvalet.com/**

**Role:** Developer

**Technologies:** Node.js, Express, Angular, MongoDB, Lineman, Bower

Epic valet is a Valet Management system and scheduler based on MEAN stack technology that will be used by the company itself to manage its valets and its schedule. Documents library is used for employee guidance and ToDo Module to assign list of tasks to valets. Here I worked on maintenance of the project to fix live users' feedbacks.

**Project: HeroesTask - (Similar to Airtask Australia)**

**Role:** Developer

**Technologies:** CakePHP-3, jQuery, Mysql, AJAX, Stripe Payment Gateway, Twilio

HeroesTask is a community marketplace that provides on-demand a trusted workforce to outsource tasks for people and businesses. Request a task to the HeroesTask community, hire a flexible worker and relax while your task gets done. In this project, I was directly involved in the website schema designing and development. My other responsibilities included module development, technical documentation, and client communication.

**Project: Financial Mobile app**

**Role:** Developer

**Technologies:** CakePHP-3

This application is a trading application. Users can See, Buy, and Sell Shares, see stocks and get updated data for shares from IEX API. The buy and sell process is offline and managed by the admin. Also, the companies details to list stocks are also managed by backend i.e. whose stocks need to listed in the app.

**Project: Cirrus Systems - https://cirrussystemsus.com/**

**Role:** Developer

**Technologies:** CodeIgniter

Internal Company in the US – In-house management website. Ticket management tool system, Resolving tickets, account management, employee, staff, and user management. Here, I was involved in analyses of each task and dependency on other modules and communicating daily with the client.
